# Comeback Handling SOP

---

**Root cause analysis and service recovery for rework jobs**

---

## Purpose

---

Resolve quality failures systematically and prevent repeat defects.

# Procedure

---

## Step 1 — Intake the comeback

1. Listen fully — do not argue or blame customer
2. Photograph reported defect under proper lighting
3. Log in CRM as comeback — link to original job

## Step 2 — Diagnose

1. Lead installer inspects and documents root cause
2. Classify: installer error, material defect, environmental, customer damage, or expectation gap
3. Complete Comeback Analysis section on work order

## Step 3 — Resolve

1. Schedule rework at earliest slot — priority over new jobs when safety/quality at risk
2. Perform rework per original manual procedure — no shortcuts
3. Re-QC with different inspector when possible

## Step 4 — Close loop

1. Customer walkthrough of correction
2. Document lesson learned in team huddle if pattern detected
3. Update competency training if installer-specific
