SOP-102 — Scheduling Appointments

Forge Standard Operating Procedures v1.0

Section 2: Customer Experience

Purpose

Book production time accurately so bays are neither over-committed nor idle.

Scope

Customer service and managers scheduling drop-off, install, and pickup.

Procedure

Capacity check

1. Verify bay availability against job complexity — do not book two full front-end PPF jobs in one bay same day.
2. Block buffer time for QC and unexpected rework (minimum 2 hours per major job).
3. Confirm material on hand or order lead time before confirming date.

Booking

1. Create CRM appointment with: customer, vehicle, scope, estimated labor hours, assigned bay, deposit status.
2. Send confirmation text/email with date, time, address, what to bring, and cancellation policy.
3. For multi-day jobs: book drop-off, estimated completion, and pickup as separate calendar events.

Changes & no-shows

1. Reschedules: offer two alternatives; note reason in CRM.
2. No-show: call within 30 minutes; release bay after 2 hours; apply cancellation policy if applicable.

Quality standards

- ☐ Schedule accuracy — completed on promised date $\geq 95\%$
- ☐ Every appointment linked to work order before vehicle arrives
