SOP-900 — Installation Failure

Forge Standard Operating Procedures v1.0

Section 10: Emergency Procedures

Purpose

Respond immediately when an installation cannot be completed to standard.

Scope

Any installer who identifies a non-recoverable defect, substrate failure, or scope impossibility.

Procedure

Stop work

1. Halt install immediately — do not "push through."
2. Notify lead installer and manager before customer contact.
3. Photograph condition; preserve removed film if applicable.

Assessment

1. Determine root cause: prep failure, film defect, paint failure, scope error.
2. Document on work order with recommended remedy and timeline.
3. If film defect: quarantine roll lot; contact distributor.

Customer communication

1. Manager calls customer same day — honest explanation, revised ETA.
2. No vehicle delivery until remedy complete and SOP-206 passed.

Quality standards

- ☐ Manager notified within 30 minutes of stop-work decision
- ☐ Root cause coded in CRM for trend analysis

Safety notes

Never leave vehicle in unsafe condition — partial installs secured or film removed.
